

PREMIX 2000 AIR/FUEL RATIO ANALYZER FOR PREMIX BURNERS

Permanent installation sensor for control of fiberizing lines and other precombustion applications.

The Thermox PreMix 2000 analyzer accurately and continuously measures the proportions of oxygen and fuel in pre-mix gases, operating in either excess fuel or excess air conditions. The analyzer is fed a small sample of the air/fuel mixture, burns it and then measures the net oxygen or net excess fuel content of the mixture.

The PreMix 2000 uses the Series 2000 Control Unit. This state-of-the-art microprocessor control unit provides software-selectable calibration options, and extensive analog and digital I/O capabilities, including a bi-directional RS-485 communications port. It also employs a modular design that makes adding future upgrades or servicing easy.

OPERATION

Most of the sample gas entering the analyzer passes through the bypass flow meter, which ensures a fast response and keeps the sample inlet purged of dead volume. A small portion of the sample flows through the sample flow meter and flashback arrestor to the furnace. An igniter at the inlet of the furnace enables the fuel mixture to burn. The products of combustion then flow past the zirconium oxide cell, where they are measured.

APPLICATIONS

- ▶ Glass forehearth
- ▶ Air/fuel mixtures
- ▶ Glass fiber apparatus
- ▶ Open flame brazing and soldering
- ▶ Tempering furnaces
- ▶ Gas generators
- ▶ Metals and metal forming

FEATURES/BENEFITS

- ▶ Measure air/fuel ratio in open-flame applications where flue gas measurements are not practical.
- ▶ Measurement and display options include excess oxygen, excess fuel, combined excess oxygen to excess fuel, fuels/oxides, oxides/fuels, and combustibles.
- ▶ Operates under either excess air (lean) or excess fuel (rich) conditions.
- ▶ Calculates calibration gas mixture concentration for excess fuel ranges.
